

Is It Possible To Recycle Everything?

Year 2/3 Summer 2 2022

Recycling carefully means that resources can be used again, helping protect the planet

Jo Sheppard is a local artist known for her landscape work. She often uses wax resist as a way of waterproofing areas of work for effect.

Key Vocabulary and Definition

deforestation	The clearing of forest to make way for farming or to use the wood for fuel,
ecosystem	A community of interacting organisms and their physical environment.
equator	An imaginary line, halfway between the north and south poles, that divides the Earth into the northern and southern hemispheres.
landfill	The oldest and most common form of waste disposal. A dumping ground for the disposal of waste materials
Magnet	A material or object that produces an invisible magnetic field. It pulls on other magnetic materials and attracts or repels other magnets.
rainforest	A closed and continuous tree canopy with moisture dependent vegetation
recycle	Recycling turns waste (rubbish) into reusable material
resource	A useful or valuable possession. These can be natural or man-made

Birds, bats, and butterflies live in the tops of the tallest trees. That is called the **emergent layer**.

In the tops of the shorter trees, or **canopy**, you can find animals such as toucans and monkeys.

Snakes, red-eyed tree frogs, and other animals live in the **understory**, or lower branches.

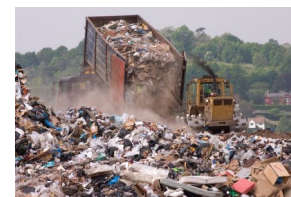

Animals such as jaguars can be found on the dark **forest floor**.

We need to think creatively about the things that go to landfill from this bin.

How can we make sure we throw less away?

How can we reuse things we often throw away?
